

EDUCATIONAL QUALIFICATIONS		
Course	Institution	Year
Post Graduate Certificate Business Analytics	XLRI, Jamshedpur	2025 - 2026
Bachelor of Commerce (Accounting & Finance)	University of Calcutta, BESC College	2017 - 2020
Class XII (ISC)	St. Joseph School, Bhagalpur	2015 - 2017
Class X (ICSE)	Mount Assisi School, Bhagalpur	2015
WORK EXPERIENCE		
Business Analyst - CarDekho (Southeast Asia) – Gurgaon		September 2025 – Present
- Engineered an end-to-end cross-selling ML pipeline using Python & SQL, consolidating 50M+ records into 36K high-quality leads for PH & ID. - Improved lead conversion potential & targeting efficiency by implementing ML-driven lead scoring & rule-based product allocation. - Enhanced lead segmentation precision by enriching customer demographics using ML & NLP based gender prediction with 97% accuracy. - Developed a TF-IDF vectorization + Logistic Regression model with n-grams & cross-validation, improving customer profiling for analytics. - Built Power BI dashboards to monitor agent efficiency, lead lifecycles, funnel conversion & campaign ROI, enabling data-driven decisions. - Optimized marketing spend allocation by analyzing revenue vs campaign spend using DAX-driven KPI frameworks & reducing inefficiencies. - Reduced manual reporting by ~65% by building a scalable Google Apps Script-based data consolidation enabling automated data-ingestion. - Automated document processing to extract & organize PDFs & payment proofs, improving audit readiness, data traceability & compliance. - Designed a rule-based reconciliation engine processing ₹59M transactions, applying tolerance-based logic improving financial accuracy. - Improved accuracy with tolerance-based reconciliation logic to handle discrepancies in date, amount, fee deduction & transaction patterns. - Mentored 4 interns on analytics, SQL, strategy & dashboarding, contributing to 2 PPO conversions & strengthening team capability.		
Business Analyst - Aegis Covenant – Gurgaon		September 2023 – August 2025
- Increased business placement by 28% with strategic placement & partnership analysis by segmentation & placement efficiency analysis using SQL. - Identified OEM-State activation trends through EDA & statistical analysis, enabling data-backed expansion using Pandas, NumPy, & Matplotlib. - Improved data quality by flagging 2%+ critical discrepancies using a rule-based pipeline with schema enforcement, data coercion & logic trees. - Analyzed 600K+ records across 100+ features & built dashboards using Plotly to enable real-time rejection analysis & insurer performance tracking. - Improved 35% reporting efficiency by optimizing ETL pipeline & tuning 50 SQL queries using joins, window functions, and subqueries in SQL Server. - Increased metric accuracy by 30% by standardizing KPI logic & improved revenue outcomes by 25% by identifying Insurer-Channel performance. - Reduced issue resolution time of Insurer-OEM by 34% using hypothesis testing, A/B testing & root cause analysis on quote log data in Excel & R. - Reduced manual effort by 60% by building tools using App-Sheet with real-time updates & workflow automation for operational efficiency. - Collaborated with multiple clients to design South India growth strategy using data analysis, generating ₹50 lakh profit within six months.		
Internship		
Creative Intern (US Market) – Pocket FM		February 2022 – July 2022
- Content Management Expert: Managed and created content as per company standards while developing content strategies for diverse audiences. - Localization Specialist: Produced audiobook localization sheets incorporating cultural nuances and created structured concept notes for projects. - Project Creator & Researcher: Conducted market research to identify trends and support content innovation initiatives.		
Creative Intern – WorldRef		June 2021 – Aug 2021
- Strategic Content Planning: Developed content strategies using Google Analytics, geographical targeting, segmentation & keyword planning. - Collaborative Team Efforts: Collaborated with writers & content strategists to SEO-focused copy using content briefs, & on-page optimization. - SEO Optimization: Implemented SEO strategies to improve client ranking through targeted content using on-page SEO, & performance tracking.		
SKILLS		
Analytics & Data	● Python, SQL, R, Excel, Google App Script, Orange, AnyLogic	
BI & Visualization	● Power BI(DAX), Tableau, Looker Studio, Google AppSheet, Matplotlib, Seaborn	
Machine Learning	● Regression, Classification, NLP, Clustering, Model Evaluation, Scikit-Learn, Gradient Boosting, Monte Carlo Simulation	
Data Techniques	● ETL, EDA, Data Modeling, Feature Engineering, Hypothesis Testing, Statistical Analysis, Business Forecasting	
Business Skills	● Stakeholder Management, Problem Structring, KPI Design, Process Optimization, Automation, Business Review	
PROJECTS		
Capstone Project: Organ-Wise Disease Risk Prediction	- Built ML pipeline using Logistic Regression, Random Forest, and Gradient Boosting for multi-organ disease risk prediction. - Engineered biomarker categorization and probabilistic scoring using 100+ clinical, demographic, and lifestyle parameters. - Developed contextual risk modeling using age, smoking, and lifestyle multipliers for personalized health risk stratification. - Designed dashboards delivering probability-based cardiovascular, hepatic, renal, metabolic, and hematology risk insights.	
Data Mining Marketing Channel & ROI Optimization	- Built customer segmentation using K-Means clustering to optimize marketing spending & improve acquisition efficiency. - Identified high-value customer clusters using ROI, profit margin, & cost-per-conversion analysis for targeted marketing. - Developed Decision Tree classification model mapping acquisition channels with profitable customer segments for targeting. - Improved ROI strategy by identifying high-performing customer clusters achieving ROI values up to ~674.	
Demand Forecasting in US Retail	- Built ARIMA, Holt, and Exponential Smoothing forecasting models on 10-year retail sales data for demand prediction. - Achieved lowest forecasting error using ARIMA, enabling accurate 12-month retail demand forecasting and trend analysis.	
Text Mining & Sentiment Analysis	- Built NLP classification models using TF-IDF, Random Forest, Sentence Transformers, and Zero-Shot BART for spam detection. - Performed sentiment analysis, topic modeling, & entity recognition to identify emotional bias patterns across news datasets.	
Financial Analytics & Portfolio Allocation	- Analyzed 10 global indices using CAGR, Sharpe, Sortino Ratio, & drawdown metrics for risk-adjusted performance evaluation. - Identified NIFTY50 as strongest risk-adjusted performer & derived diversification insights for portfolio allocation.
